

BENZAC FIRST-CONSULT KIT

THE RIGHT FIRST STEP, IN TEEN LANGUAGE.

A practical HCP and pharmacist toolkit for first-acne conversations, correct product use and referral.

DERM-LED | PHARMACIST-SERVED | PARENT-APPROVED

PURPOSE

One conversation. Three outcomes.

1 HELP NOW

Identify whether the person needs a simple product-use explanation or professional evaluation.

2 EXPLAIN SIMPLY

Use clear spot-type and product-use language. Do not overwhelm with ingredient jargon.

3 REFER EARLY

Painful, deep, widespread, persistent or scarring acne should be professionally assessed.

BOUNDARY OF THIS KIT

- Supports a first-acne conversation; it does not diagnose.
- Uses only locally approved product claims and directions.
- Keeps severe or uncertain cases on a referral-first pathway.
- Captures no child data and stores no selfies.

TEEN LEAFLET

Spot appeared. Day still yours.

CLEAN

PATCH

PEEL

THE SIMPLE RULES

- Wash your hands and gently clean the area.
- Pat skin completely dry before applying a patch.
- Use the patch only for the spot type and duration stated on the approved pack.
- Do not pick, squeeze or layer toothpaste or harsh DIY remedies.
- If acne is painful, deep, widespread, persistent or scarring, speak to a dermatologist.

YOUR FIRST FIX IS A STEP, NOT A VERDICT.

Acne is common. Correct use and timely professional support matter more than hiding the spot.

PARENT GUIDE

Permission comes from clarity.

WHAT THE PATCH DOES

Creates a simple, visible product-use step for the appropriate spot type. Any six-hour statement must use Galderma's locally approved wording and substantiation.

HOW TO SUPPORT CORRECT USE

Read the approved directions together, avoid ingredient stacking, and keep the routine gentle and manageable.

WHEN TO SEEK HELP

Painful, deep, widespread, persistent or scarring acne needs professional evaluation. A patch is not the complete answer.

THE PARENT PROMISE

Simple directions. No diagnosis. No hidden data collection. No claim beyond the approved pack.

COUNTER SCRIPT

Three questions before the recommendation.

1

Is it one emerging spot or a visible whitehead?

Emerging spot: explain Fast Fix. Visible whitehead: explain Skin Restore, subject to approved use.

2

Is it severe, painful, deep, persistent, widespread or scarring?

If yes or uncertain: do not diagnose at counter. Refer to a dermatologist.

3

Would you prefer the proposed ■99 first strip or the core pack?

Explain pack count, approved directions and the routine ladder without pressure.

Never promise a guaranteed result, diagnose acne, recommend off-label use or capture personal data at the counter.

CLAIM + SAFETY

Say only what can be supported.

APPROVED-CLAIM BANK

Use exact India-approved language supplied by Galderma Medical and Regulatory. The global Fast Fix page states clinically proven visible results in six hours; local approval is still required.

DO NOT SAY

"Cures acne," "works for everyone," "prevents all marks," "dermatologist prescribed," or any superiority claim without direct substantiation.

RED-FLAG REFERRAL

- Deep or very painful lesions
- Widespread or rapidly worsening acne
- Persistent acne despite appropriate use
- Scarring or significant distress
- Any uncertainty about product suitability

DOCUMENTATION CHECK

- Current approved pack and directions
- Approved claim source and expiry date
- Sample and batch documentation
- Adverse-event escalation route
- Training completion and mystery-shop result

FIELD CHECKLIST

A consistent first-consult system.

- ☐ Correct product and spot-type guide is visible
- ☐ Current approved claim bank is available
- ☐ Staff can deliver the three-question script
- ☐ Referral boundary is understood
- ☐ No personal data or selfies are captured
- ☐ Samples are documented and consent rules followed
- ☐ Parent-facing guide is available
- ☐ Feedback is logged without identifiable child data

Pilot targets: 2,500 dermatologists detailed in seed phase; 12,000 pharmacy dispensers live by Year 1 H2. These are proposed rollout targets, not Galderma's current footprint.
